EDUCATION

Ghulam Ishaq Khan Institute of Engineering Sciences & Technology — Pakistan

2025

Bachelor of Science in Data Science

- CGPA: 3.64 (Dean's Honor List)
- Relevant Courses: Data Structures, Artificial Intelligence, Data Engineering, Data Mining, Inferential Statistics, Data Warehousing & BI, Databases, Engineering Economics

WORK EXPERIENCE

Motive

June 2025 - Current

Data Quality Analyst – GTM Team

- Scraped, cleaned & uploaded 3000+ prospect accounts creating a pipeline value of 2+ million USD.
- Developed an automation tool to match thousands of accounts with millions of contacts, reducing processing time from 4 hours to 0.5 hours via parallel processing and big data tools like PySpark.
- Orchestrated Airflow pipeline to scrape 50k unions documents from department of labor, parse it via open-sourced OCR models and feed it to LLM to build the perfect unions data pipeline and storage.
- Applied cosine similarity & fuzzy logic for industry classifications for segments with 96% classification accuracy (specifically for Food and beverage industry) facilitating efficient marketing campaigns.
- Created google sheets Macros to automatically clean thousands of rows of address data reducing time spent by 97%.
- Employed Ollama Agents (Open-sourced llms') to automatically classify account and customer data in needed categories, saving API costs by 100% and time spent by 60%.
- Created a Tableau Dashboard to visualize account scores from a quality perspective based on different data health metrics segmented by country and business segments, eliminating needs for manual analysis and enabling continuous data quality improvements from a data perspective.
- Built an internal autonomous Gemini deep research agent to search for hard-to-find companies and provide a detailed table for each company including important components like phone, email – drastically improving team's account enrichment ability by 20%.
- Put in place Airflow pipelines to monitor for data anomalies in a dataset of 3.4M companies which reduced number of tickets raised by the sales team as they encountered less problems in the records.
- Developed and maintaining a website redirect script that checks chain links in websites to see if the URL changes when accessed on web which led to decreased error rate by deduplication team in merging accounts.
- Lead and Finalized building of disqualified accounts tableau dashboard to help stakeholders understand what and who is disqualifying accounts and if they are doing it correctly or not.
- Built a pipeline (TableApi) to automatically detect accounts that have Composite Asset Count greater than 50k which lead to timely review of those accounts to see if the value needs to be updated to better reflect fleet components for the account or not (now shifting the pipeline to DBT).
- Operated and monitored recurring dbt pipeline runs through Paradime/Bolt, including dependency setup and production outreach-sync models, helping keep GTM data production-ready.
- Improved Salesforce contactability-data coverage by coordinating batched loads, validating results, and reconciling downstream records against source outputs.
- Built and tested data-quality automation for account-hierarchy workflows and improved title classification with bounded, case-insensitive regex logic while preserving exclusions and reducing false positives.
- Improved account-website enrichment by refining candidate validation logic and coordinating the workflow to populate missing Salesforce websites from Snowflake.
- Designed an on-demand Airflow/Kubernetes pipeline pattern that reads reviewed Snowflake data in bounded batches, processes results in memory, and writes audit-ready output to a permanent table with retry and idempotency considerations.
- Contributed to Hex analytics migration and dashboard validation by reviewing Snowflake-backed queries and documenting deployment considerations for downstream analytics.

DAO PropTech

January 2025 – May 2025

Junior Data Scientist

- Pioneered the development of a Retrieval-Augmented Generation (RAG) chatbot, leveraging Milvus as a vector database and OpenAI's LLM to create an agentic solution (Lang-chain framework), increasing customer engagement by 25% within the first quarter of deployment.
- Engineered Bayesian statistical models to analyze user activity across company platforms, resulting in a 15% increase in user-to-client conversion rates by designing targeted campaigns based on behavioral insights.
- Built Data pipelines using Airflow, click-house DB to improve dashboard loading time and increase data access.

S&P Global

June 2024 - September 2024

Data Governance Intern (Market Intelligence)

- Enhanced data integrity by 30%, deploying Python scripts on GCP to validate 50+ datasets and flag discrepancies.
- Increased content generation efficiency by 55%, fine-tuning GPT-4 to generate 1000+ new and existing S&P index descriptions.
- Improved stakeholder decision-making by designing a dashboard for real-time tracking of 200+ datasets.
- Reduced search time by 40%, standardizing index retrieval in S&P databases by integrating Bloomberg naming conventions.
- Achieved 1st place in a global intern innovation challenge, enhancing data accessibility by 35% through creating a Retrieval Augmented Generation (RAG) feature on CapIQ using GENAI.

Citi Bank

June 2023 - August 2023

Summer Data Analyst (Securities & Services Division)

- Amplified portfolio returns by an average of 20%, developing 3 investment models.
- Elevated investment precision by processing and refining over 10 datasets.
- Reduced trade settlement discrepancies by 30%, implementing accurate tracking using Excel Dashboards.
- Decreased time wastage by 30%, creating tax reports in Excel using built-in functions.

SKILLS & INTERESTS

Skills: Quantitative modeling, Python, SQL, R, Machine Learning, Data visualization (PowerBI, Tableau, HEX), Cloud computing (AWS, GCP), MS Excel (Data Modeling, Pivot-Tables), Hadoop, DBT, Docker, Git/Github, Salesforce, Snowflake, Airflow.

Interests: Financial markets, Quantitative research, Data-driven decision making, Algorithmic trading.
